Furnace - needs -

-new control board

-16x25x1 filter rack

-Blower motor 1/2 hp

- Furnace PTU ( Precision Tune Up)

AC - needs-

-Dual Capacitor

- tighten up low voltage wire

-tighten up high voltage conduit

- AC PTU ( Precision Tune Up)

\_\_\_\_\_

Turn on the Furnace when I got there and there was no response. Thermostat is digital and fairly new .

Furnace has power / control board is not responding

Tested blower by itself and it will run but the bearings are pretty noisy due to wear and moisture.

There is no Air filter on the furnace . There is a wall air filter grill but it is no attached to the furnace . The furnace return hole is facing the other direction. Drawing from the closet space . Closet does have louver doors.

Turned on AC and again no blower operation.

Outside unit did come on . Fan motor sounded good . Fan blade was in good condition.

Outdoor coil is dirty and needs cleaned.

Capacitor tested weak .

Contactor was [REDACTED] dition.

Thermostat wire running to AC is loose and needs secured.

High voltage wire running from disconnect to AC unit is on the ground and needs secured.

We don't know the refrigerant levels due to no blower and low outside / inside temperatures.
